btw_filmz Ham Radio Field Day brought amateur radio operators together to demonstrate how reliable communications can be established from almost anywhere, even when traditional systems fail. Throughout the event, operators set up portable stations, made real-world radio contacts across the country, and showcased equipment and techniques used during emergencies. Amateur radio plays a critical role during disasters such as earthquakes, wildfires, floods, and other incidents when cell service and the internet may be unavailable, providing an independent communications network that can help keep communities connected.

The background of the slide is a dense, out-of-focus field of three-dimensional, light blue characters. These characters include various letters of the alphabet (A-Z) and numbers (0-9), all rendered in a sans-serif font. They are scattered across the entire frame, creating a textured, abstract effect. A white rectangular box is positioned on the left side of the slide, containing the text 'A final word' and a short horizontal purple line.

A final word

Seven years after the plague, amateur radio is the last communications system working in Los Angeles.

The power grid is dead. The cell towers are dark. But high on a fire road below the ruined Griffith Observatory, an old ham named Trevor still keys up his converted news van every morning at six — antennas up the mast, a net called into the empty air, a signal thrown at a world that stopped answering.

His partner Jack works the hillside, carrying berries to the blue-skinned woman who climbs out of the trees at dusk.

Then, on the cleanest bands any operator has ever heard, the silence breaks. A handful of self-taught kids across Europe. A young woman alone at the coast, transmitting under a dead man's call sign. And, bounced off a derelict relay on the far side of the moon, a signal that has waited seven years for someone down here to finally say "*here I am.*"

What answers at noon will force every survivor to choose: the world that's leaving, or the one clawing its way back.

Radio Silence is a post-apocalyptic story told in call signs and carrier waves — about grief, devotion, and the first rule of the air: that no one was ever built to reach far enough alone.

ABOUT THE AUTHOR

Greg Lewolt

Greg Lewolt is a working character actor. He first met J. Scott Bovitz — N6MI — in the high school theater department, where the two shared a stage and struck up a friendship that has lasted ever since. Greg wrote *Radio Silence* built around Scott's magic radio van.

TECHNICAL ADVISOR

J. Scott Bovitz — N6MI

Licensed since 1969, N6MI has chased DX and run contests from the field for over five decades. He runs a converted ENG van — a former "cellular on wheels" — with a 56-foot pneumatic mast, a five-kilowatt generator, and a Yaesu FTdx101D driving an ACOM amplifier and a pair of ICOMs.

From that mobile station he has earned DXCC — mixed, CW, and phone — working 150+ countries from 160 meters up through the UHF bands, with contacts out to 10 GHz. Every frequency, band opening, rig, antenna, and net-control procedure in *Radio Silence* was checked against his real-world operating.
